

Anti-pattern Coding

- Anti-pattern: When new reactive objects are created for every user interaction

- Typically happens when a `render*()` is called within an `observe*()`

• Correct pattern: Change the established reactive values' *value*

• Using *anti-patterns* will cause the react 16 graph to become very large

• Note: Anti-pattern is only encouraged for newly created content. Ex: in [Tab \(1\)](#)

Anti-pattern Coding

- Anti-pattern: When new reactive objects are created for every user interaction
 - Typically happens when a `render* ()` is called within an `observe* ()`
- Correct pattern: Change the established reactive values' *values*
- Using *anti-patterns* will cause the `reactlog` graph to become **very large**
- Note: Anti-pattern is only encouraged for newly created content. Ex: `insertTab ()`
