# Future Ideas

- Visually differentiate separate user sessions

- Display the value of an endpoint (`output`) or conductor (`reactive()`)

- Add expandable / collapsable groups for a set of reactive objects
  - Ex: `renderPlot` is made of 5+ reactive objects...
    *really only* one reactive component for a user

- Remove reactive objects from the `reactlog` graph that have been garbage collected

- Combine `reactlog` and `profvis` to analyze a Shiny application's performance and reactive state simultaneously
